FOREWORD

This volume is the third issue of *Ames Research Center Publications* covering literature published in 1975. The previous issues covered the period from July 1, 1971 through December 31, 1974. Annual issues are intended for each subsequent calendar year. *Ames Research Center Publications* continues the earlier *Contributions of Ames Research Scientists to the Aerospace Literature*, which covered the fiscal years 1969, 1970 and 1971.

The bibliography is divided into two sections: Section I includes published works appearing during the calendar year 1975; and Section II includes publications for earlier years not included in previous annual bibliographies. Publications are listed by directorate, division, type of publication and author. The Ames organization code appears in the lower right hand corner of each page containing citations for divisions represented in the bibliography. Each NASA report is identified by a technical report number and by a NASA accession number so that most items can be ordered by using the information provided.

Additional information for ordering publications cited may be obtained by referring to NASA's *Scientific and Technical Aerospace Reports* (STAR), *Limited Scientific and Technical Aerospace Reports* (L-STAR), and *International Aerospace Abstracts* (IAA). The NASA unlimited reports are available in either hard copy or microfiche through the National Technical Information Service (NTIS), Springfield, VA 22151, or through the Government Printing Office (GPO), Washington, D.C. 20402. Items identified with an X accession number are often limited or classified and available only to certain individuals or organizations. These documents must be ordered from the NASA center or from the institution which produced them. Patents are available through the Commissioner of Patents, U.S. Patent Office, Washington, D.C. 20231.
